B.Tech – Computer Science & Engineering

March 2026

Task 1: Digital Literacy Awareness Presentation

For the first task, I created a presentation on Digital Literacy Awareness with the goal of helping students understand how to use the internet and digital tools in a smart, responsible, and safe way. The title of the presentation was "Digital Literacy Awareness – Empowering Students in the Digital World."

What the Presentation Covered

The presentation was divided into three main parts:

- What is Digital Literacy? – This section explained that digital literacy is not just about knowing how to use a phone or laptop. It's about using digital devices wisely – finding information, checking if it's reliable, creating content responsibly, and communicating professionally online.
- Safe Internet Practices – This section focused on how students can protect themselves online. It covered things like using strong passwords, not clicking suspicious links, being careful on social media, and keeping your personal information private.
- Email Etiquette – The third part was about professional communication. It talked about how to write a proper email – using a clear subject line, starting with a formal greeting, keeping the message concise, and avoiding casual language like slang or emojis in professional settings.

The presentation was designed using Canva and exported as a PDF. The overall theme was kept clean and consistent in green, which made it visually appealing and easy to follow.

Task 2: LinkedIn and GitHub Profiles

For this task, I set up and configured my professional profiles on LinkedIn and GitHub – two of the most important platforms for any student in the tech field.

LinkedIn Profile

I created my LinkedIn profile as Parth Sharma, a student at VIT Bhopal University, based in Bhopal, Madhya Pradesh. The profile was set up with my university affiliation and is publicly visible. I currently have 12 connections and the profile URL is [linkedin.com/in/parth-sharma-4293323a8](https://www.linkedin.com/in/parth-sharma-4293323a8). The profile is set to "Open to" opportunities, which means recruiters can see that I am available for work. I also added options to signal that I am open to internships or job roles.

GitHub Profile

My GitHub username is `parth25bce10755-vit`. I have created one public repository called `vityarthi-project`, which is a Python-based project. The profile shows a contribution graph for the year 2026. While I am just starting out on GitHub, the repository is live and publicly accessible, which is a good first step toward building a technical portfolio.

Overall, this task helped me understand the importance of having a digital presence as a student. LinkedIn helps in professional networking and job opportunities, while GitHub acts as a portfolio to showcase your coding work.

Task 3: Coding Practice on CodeChef

For the third task, I practiced competitive programming on CodeChef under the username darkdynamic (internal username: brood_coast_37). The platform is widely used by students to improve their problem-solving and coding skills through contests and practice problems.

What I Did

I solved a problem called "Different Consecutive Characters" (difficulty: 879). The problem involved a binary string and required finding the minimum number of character insertions so that no two adjacent characters are the same. I wrote my solution in C++ and submitted it on the platform. My solution achieved a Total Score of 100% – all 5 subtasks were marked as Correct.

Profile Activity

My CodeChef profile also shows a Submissions Heat Map with recent activity from September 2025 to March 2026. I have also started a Learning Path on Time Complexity, which is a fundamental topic in computer science. The platform has various badges that I am working towards, including the Problem Solver badge where I currently have 20 out of 50 solutions.

This task was a great way to apply what I learn in class to real coding challenges and also develop the habit of regular practice.

Task 4: Digital Literacy Awareness Quiz

For this task, I created a Digital Literacy Awareness Quiz using Google Forms. The quiz was designed to test students' basic knowledge about digital literacy and safe internet practices. It had a total of 30 points and included both multiple-choice and short answer questions.

Quiz Structure

The quiz collected the following details from respondents:

- Name and Registration Number
- Q.1 – What is digital literacy? (MCQ)
- Q.2 – Which of the following is a safe internet practice? (MCQ)
- Q.3 – What is digital literacy and why is it important? (Short Answer)
- Q.4 – Name three safe internet practices (Short Answer)
- Q.5 – What should you include in the subject line of an email? (MCQ)

Responses Collected

The form received 3 responses in total. The responses were automatically collected in a Google Sheet. All three respondents answered Q.1 correctly, identifying digital literacy as "the ability to use digital devices and the internet safely and effectively." Two respondents scored 30/30 while one scored 20/30. The responses showed that most students have a basic understanding of digital literacy, though there is still room for improvement in areas like identifying safe internet practices.

Task 5: Checklists for Digital Safety and Social Media

For the fifth task, I created two practical checklists to help college students navigate the digital world more responsibly.

Checklist 1: Responsible Social Media Use

This checklist covered the basic dos and don'ts of using social media as a college student. On the do's side, it included things like thinking before posting, protecting your privacy through strong settings (especially on apps like Instagram), verifying information before sharing, being respectful in communication, and using social media productively for learning and networking. On the don'ts side, it warned against oversharing personal details (like your address or phone number), engaging in online arguments, posting inappropriate content, clicking unknown links, and ignoring your digital footprint – since what you post online can affect your future.

Checklist 2: Stay Safe Online (India-specific)

The second checklist was tailored specifically for college students in India, where platforms like WhatsApp, UPI (Google Pay, PhonePe), and Instagram are heavily used. It covered important safety practices such as using strong and unique passwords, enabling two-factor authentication (2FA), avoiding sensitive tasks on public Wi-Fi, being cautious of phishing messages, securing UPI transactions by double-checking recipient names, and never sharing your OTP or UPI PIN with anyone – since no legitimate bank or app will ever ask for it.

The checklist also reminded students to limit unnecessary app permissions, keep their devices and apps updated, and always log out from shared devices like college computers or cyber cafes. It ended with a note on how to report cybercrime in India:

- National Cyber Crime Portal: cybercrime.gov.in
- Cyber Crime Helpline: 1930

Both checklists were simple and easy to understand – the idea was that any student could pick them up and immediately start applying the tips in their day-to-day digital life.

Task 6: Professional Email Writing

For the final task, I wrote two professional emails as part of the project – one requesting an extension for the project deadline, and another as an internship application.

Email 1: Extension Request

The first email was addressed to the concerned professor, requesting an extension for the Digital Literacy Project submission. The email was written in a respectful and honest tone, explaining that due to some personal circumstances, I was unable to complete the project as thoroughly as I would have liked. I requested an extension until 31st March 2026 and offered to share supporting documents if needed. The email followed all proper email etiquette – formal greeting, clear subject line, polite tone, and a proper sign-off with my name and registration number.

Email 2: Internship Application to Dassault Aviation

The second email was a summer internship application addressed to the Internship Coordinator at Dassault Aviation. In this email, I introduced myself as a second-year B.Tech student in Computer Science & Engineering at VIT Bhopal University. I expressed genuine interest in the company – not just as a brand but because of the kind of aerospace and defense innovation they are known for. I briefly mentioned my skills in software development, data structures, and systems thinking, and expressed my eagerness to contribute and learn. I also offered to share my resume and transcripts and left my LinkedIn profile link for reference.

Both emails were formatted correctly and exported as PDFs. This task was a great exercise in understanding how professional communication works in the real world – something that is just as important as technical skills for any engineering student.

Overall Reflection

This project was a well-rounded exercise in digital literacy – not just learning about it in theory, but actually practising it. Each task pushed me to engage with a different aspect of the digital world, from building a professional online presence to writing formal emails and solving coding problems.

I believe digital literacy is one of the most important skills for students today. The internet is a powerful tool, but only when used wisely. Through this project, I was able to apply that understanding in practical, real-world ways – and I hope the resources I created (the checklists, the quiz, the presentation) can be helpful to other students as well.
